Bundle Elements

- **1. Patient Identification:** Pediatric risk stratification (to be developed based on disease burden, past utilization and social determinants). Once identified, PCPs will help assess and prioritize.
- 2. Assessment: Pediatric specific screening tools are used to identify gaps in care and ensure social determinants are identified.
- 3. Plan of Care: Once the team has developed a relationship and assessed the patient, they meet to collaboratively create a patient centered care plan which is then documented in the chart
- **4. Team Coordination:** Team engages with the member and family. Identifies issues and works toward their goals and needs. Intensity of care highly variable and tailored to individuals
- **5. Transitions:** Patients who have an inpatient stay or receive services outside our system receive care coordination to ensure a smooth, well-managed transition. Team monitors reports to identify patients in ED/inpatient.
- 6. Advanced Care Planning when appropriate
