Promising Practices: Two OPIP-led Efforts Spotlight

1. **Identifying Children with Health Complexity Using System-Level Data**
 - Aim: Develop and implementing a methodology to use **system-level data** to identify **children with health complexity** (children that have both medical AND social complexity).
 - Support **population-level reporting at the state, county and CCO-level**.
 - Data is able to be shown specifically for children 0-5.
2. **Pathways from Screening to Services: Providing Follow-Up for Young Children Identified on Developmental Screening**
 - Aim: To improve the **receipt of services** for young children who are identified at-risk for developmental and behavioral delays
 - Supports two-phases of work:
 - **Phase 1: Across-sector stakeholder engagement and baseline data collection** about current processes and where children are lost to follow-up;
 - **Phase 2: Implement Pilots to improve** the number of children who receive follow-up and coordination of care in primary care sites, early intervention, with community-identified early learning partners

Learnings from the Efforts That Could be Brought to Scale

1. Leverage cross-sector data to facilitate cross-sector conversations about the **population children**, their **needs**, and the **capacity of systems** to address the child and their family
2. Pathways from Screening to Services: **Providing Follow-Up for Young Children Identified on Developmental Screening**
