

Integrated Care for Kids Marion County and Polk County Partnership Council

December Meeting - Suggestions for Best Match Care Coordination & Integration of Services

On December 10th the Marion County and Polk County Partnership Council had a *Community Cafe Informed Session* focused on generating ideas related to what **best match care coordination** and **integration of services would look like for children, youth, and young adults** identified via the risk stratification as needing enhanced service integration.

Your feedback is needed:

A graphic recorder captured outcomes of the meeting through a visual reflection of the conversational process. The use of graphic recording is
demonstrated to be a powerful tool in creating an experience of being witnessed and strengthening the sense of community. The draft of the
visual from December 10th is below. We want to ensure that your voice is heard and visualized within this graphic. Please review the graphic
below in Figure 1 and share what you think should be added.

Below are the question prompts that were used to drive the development of this visual

- Review Figure 2 and think of a child, youth or young adult that you have interacted with in your work who meets the criteria of Service Integration Level 2 and would have benefited from integrated care coordination addressing needed home and community based supports. Please answer the following questions:
 - O What do you wish had existed that would have helped you to better support this child, youth, or young adult?
 - o If you could interview them on their strengths and their priorities for supports (or removal of barriers), what do you think they would say?
- Again, keeping in mind Figure 2 please provide your response to the following questions:
 - We are at the end of 2027 in Marion County and Polk County as the InCK Cooperative Agreement is concluding. Thinking of this child who is identified by the risk stratification What has changed for them? What services, supports, and collaboration exist?
 - o What could enable your envisioned integration of services for children, youth, and young adults?

Oregon InCK Model Service Integration Levels 2 and 3

Care Coordination

	Point 1: Exhibited need for two core child services				ent		
	Child had 1+ core service	and exhibited need for additional services		Point 2: Functional symptom of impairment Level 2			
2A	Child had physical or behavioral health service		Care, Ever Been in Foster r out of home placement modeling	Medical Complexity Complex Chronic, OR Non-Complex Chronic			
2B		Social Complexity Parent substan Parent mental Parental incarc	ce abuse, &/or health, &/or	Medical Complexity			Enhanced assessments and screenings
2C		Social Complexity (Of remaining 8 factors) • 3 or more indicators not identified in 2A and 2B (Includes factors such as access of TANF, child use of mental health services, child use of behavioral health services, diagnosis of child abuse/neglect, parental death, non-English primary language, and parent disability)		Medical Complexity Complex Chronic	Increasing intensity of integrated care coordination		sest Match Care coordination
2D		Social Complexity: • Chronic absenteeism from K-12 education		Medical Complexity Complex Chronic, OR Non-Complex Chronic	ntensity		
		† i	т ит ит	gration Level 3 (SIL 3)	ncreasing	Level 3	Integrated Case Management & Child-Centered
		Level 3 3A.	Child currently in or at risk of out-of-home placement	Medical Complexity		0	Care Planning
		3B	Prolonged or multiple admissions	Medical Complexity		A	Home and Community- Based Suppor
